

LampLube™

Dielectric Silicone Grease

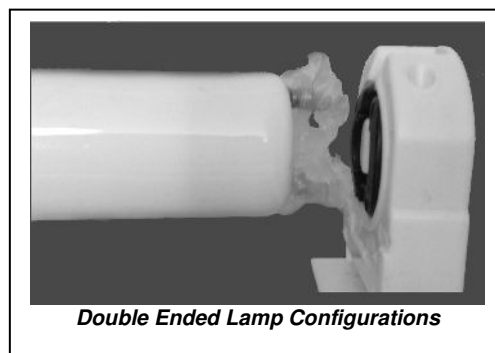

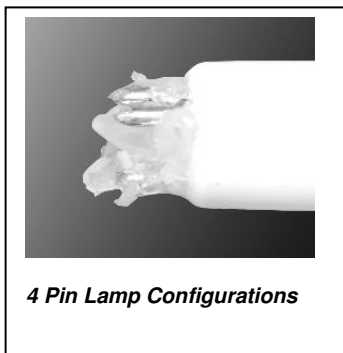

APPLICATION INSTRUCTIONS

LampLube is a *must* to provide the absolute best set of connection circumstances for lamp to tombstone, or lamp to plug protection under all conditions. It helps provide a barrier against liquid or vapor incursion, precluding pin, plug or holder “materials degradation” (oxidation). It is essentially non-toxic and non-melting and retains pliability even after extended service. It has excellent temperature resistance (-40 to 400°F (-40 to 204°C)). Applying **LampLube** to either double ended lamps or single ended lamps makes installations and/or relamping easier, and more secure. It’s completely safe for most any application and meets FDA 21 CFR 175.300 and meets or exceeds Mil-S-8660C.

Directions for Use:

1. Apply liberal amounts of **LampLube** to the lamp pins (4 pin lamp or double ended lamps)

2. Push lamp into receptacle (4 pin connector or bi-pin tombstone)
3. Make sure lamp/receptacle connections are snug.
